

Deep-Check.

AI-Powered Identity
Verification Platform

Continuous verification. Absolute privacy.
Real-time deepfake detection.

HIUM Solutions SL | Andalusia, Spain

<https://deep-check-two.vercel.app>

2026

Identity verified throughout the entire session.

Deep-Check is an AI-powered identity verification platform that runs entirely on the user's device.

Unlike traditional solutions that verify identity only at the start, Deep-Check continuously monitors throughout the entire session, detecting deepfakes, impersonation and anomalies in real time.

● Zero biometrics to server

All processing happens in the user's browser (WebAssembly). No biometric data ever leaves the device. GDPR native by design.

● Continuous verification

Not just at login. 6 independent detection layers monitor every second of the session. Impossible to evade.

● Zero installation

Works in any modern browser. No SDK, no apps, no plugins. The user only needs a webcam.

● Deepfake detection

AI engine trained on over one million images detects AI-generated faces, GANs and manipulation tools in real time.

6 Independent Layers

Bayesian logit-space fusion — each layer votes independently

● Vital Signs (rPPG)

Detects the cardiac pulse through micro color variations in the face. A deepfake or photo has no pulse. Impossible to fake.

● Micro-expressions (FACS)

Analyzes facial biomechanics in real time. AI-generated faces fail to correctly replicate human muscular patterns.

● Forensic AI (Pixel)

Neural network trained on 1M+ images analyzes each frame for synthetic generation artifacts at pixel level.

● Frequency Analysis

Detects patterns in the frequency domain (DCT, Laplacian) invisible to the human eye but that reveal digital manipulation.

● Keystroke Biometrics

Unique typing speed, rhythm and pressure patterns. As unique as a fingerprint. Detects if the user changes.

● Interaction Dynamics

Mouse movement, scroll patterns and interaction rhythm. Detects bots, automation and operator changes.

Product Suite

Each product uses the same detection engine adapted to the use case

● Am I Real?

Live webcam verification. User confirms they are a real human, not a deepfake or

● DateSafe

Catfish detector for dating apps. Upload the profile photo and verify authenticity

● ProofShot

Verifiable authenticity certificate for photos. GPS + timestamp + AI analysis

● DocSafe

Document verification. ELA analysis + AI to detect manipulation of photos or PDF

● ListingCheck

Photo verification for real estate and marketplace listings against AI-generated

● ResumeGuard

Photo verification in CVs and professional profiles. Batch mode up to 10 photos.

● FakeCheck Extension

Chrome extension. Right-click any web image to verify its authenticity

● REST API v1

Programmatic integration. Single + batch + webhooks. For enterprises and developers.

Reference Metrics

Evaluated under ISO 30107-3 protocol with industrial datasets

AUC > 0.99

Area Under ROC Curve

EER < 1%

Equal Error Rate

< 500ms

Browser inference time

0 bytes

Biometric data
to server

6 layers

Independent
detection

1M+

Training
images

Proven Robustness

- + Aggressive JPEG compression (quality 10-85)
- + Low lighting and backlight conditions
- + Grayscale and color filters
- + Image resizing and cropping
- + Camera blur and mobile noise

Standards Alignment

ISO 30107-3 (PAD) | NIST FATE/PAD (in progress) | GDPR Art. 25 | Anti-leak verified

Technology Stack

Frontend

- > Next.js (App Router) + TypeScript + Tailwind CSS
- > In-browser AI inference via ONNX Runtime WebAssembly
- > MediaPipe for real-time face detection
- > Zero install — works on Chrome, Safari, Firefox, Edge

AI / ML

- > Architecture: EfficientNet-B4 + Frequency Branch (multi-scale Laplacian)
- > Trained on 1M+ images from 13 diverse sources
- > Bayesian fusion of 6 independent detection layers
- > Anti-leak verified: zero overlap between train and test

Backend

- > Supabase (PostgreSQL) for authentication and session data
- > Vercel for hosting and serverless functions
- > REST API v1 with API key authentication
- > Webhooks for asynchronous integration

Security

- > 100% client-side processing — zero biometric data to server
- > Content Security Policy (CSP) configured
- > CORS and rate limiting on API
- > BSL License — code visible, IP protected

Where It Applies

● Remote Interviews

Continuous candidate verification throughout the entire interview. Detects impersonation, deepfake usage or

Sector: HR, Recruitment

● Online Exams

Biometric supervision during university exams and certifications. Detects person switching, AI tools and anomalies.

Sector: Education, Certifications

● Digital Banking

KYC extension during banking sessions. Ensures the verified user remains the same throughout the entire operation.

Sector: Fintech, Banking

● Telemedicine

Patient identity verification during remote consultations. Healthcare regulatory compliance.

Sector: Healthcare, Insurance

● Marketplaces

Photo verification in listings, profiles and ads. Detects AI-generated images to prevent fraud.

Sector: Real Estate, E-commerce

● Social Media / Dating

Profile photo authenticity verification. Protection against catfishing and fake profiles.

Sector: Dating, Social Media

Plans

Free 0

10 sessions/mo

- + All web tools
- + Browser verification
- + No API access

Starter 29/mo

50 sessions/mo

- + Everything in Free
- + REST API (1,000 calls)
- + Email support

Pro 79/mo

Unlimited

- + Everything in Starter
- + Unlimited API
- + Webhooks
- + Priority support

Enterprise Custom

Custom

- + Everything in Pro
- + Guaranteed SLA
- + On-premise available
- + Dedicated integration
